Dear,

We are proud to announce that world renowned Rad Woman in Science, Dr. Olga Kovalchuk, will present a webinar this Tuesday, April 21 at 1pm EDT on “Sex and gender science in radiation research.”

Dr. Kovalchuk’s laboratory at the University of Lethbridge in Canada discovered that males and females respond to ionizing radiation in a different way. They analyzed radiation responses in various tissues and organs using a mouse model and proposed some possible mechanisms of the sex-specific radiation responses. Their findings, published in cancer and radiation field journals, may have serious repercussions for development of sex-specific radiation diagnostic and treatment regimes. They also could influence how we design radiation protection protocols.

TRISH Red Risk School Online Series: April 27 - May 1

Dr. Jeff Willey shares information about this year's Red Risk School, presented by the Translations Research Institute for Space Health. From April 27-May 1, TRISH will present 5 webinars exploring the most pressing risks to human health in deep space: NASA's Red Risks. Sign up for one or all of the webinars here:

Future Impacts and Insights - Webinars scheduled for next week!

Wednesday, April 29th - 1:00 PM PDT/4:00 PM EDT
"On the front lines of COVID Response“ with NIAID's Andrea DiCarlo-Cohen

Friday, May 1st - 1:00 PM PDT/4:00 PM EDT
"The Current Funding Landscape“ live from UC Irvine with Past President Charles Limoli
